[ONLINE COURSES](#)

#### • **[Introduction to Dreamweaver MX 2004](#)**

If you want to be a Web designer, you need to know Dreamweaver MX 2004. In this highly interactive, project-oriented course, a Web pro will help you harness the full potential of this industry-standard development tool. You'll find out how to create, arrange, and format text, images, hyperlinks, tables, and various other media types. You'll also examine intelligent page design - with an emphasis on avoiding common layout errors.

#### • **[Introduction to Flash MX 2004](#)**

In this six-week online course, you'll learn how to use Flash MX 2004 to create dynamic, entertaining, and interactive Web sites and other projects. You'll discover the basic tools and techniques for making a Flash movie. You'll use Flash to create and modify graphics and text, build simple animations, and design Web site navigation buttons. Before you know it, you'll have a solid understanding of Flash and how best to make it work for you.

• **Building Wealth**

If you're interested in discovering how most wealthy people amassed their fortunes, this is the course for you. Contrary to popular opinion, most people don't achieve true wealth through luck or an accident of fate. Just about anybody can build wealth. All it takes is organization, discipline, and a firm knowledge of how to proceed. If you're serious about accumulating a sizable nest egg and living the life of your dreams, this course will supply you with the knowledge and skills you'll need to succeed.

• **Advanced Microsoft Excel 2003**

Maximize your investment in Microsoft Excel by learning advanced techniques that most users don't even know exist. In this practical, hands-on course, you'll learn how to use scenarios and data tables to quickly perform multiple what-if analyses. You'll discover a variety of advanced pivot table techniques, like creating calculated fields and calculated items. You'll be able to use validation to protect the integrity of your worksheets from other, less experienced users. You'll become adept at consolidating and importing data, and you'll master the art of conditional formatting to highlight duplicate entries and other common worksheet problems. Impress your coworkers by learning how to add functional and eye-catching controls to any worksheet, and find out how to nest one function inside another to accomplish just about anything Excel has to offer.

• **Everyday Math**

Ever find math baffling? This course can help you gain confidence in your basic math skills so you can start using math to your advantage. You won't find any theory or memorization here. Each of your lessons will be filled with practical exercises and information that you can put to immediate use. You'll get valuable hands-on experience and advice on using a calculator; determining the proper amount to pay in tips, discounts, and taxes; managing your income and expenses; checking your bills and bank statements for errors and overcharges; comparing investment vehicles; shopping for the best loans; buying a home; determining the right amount of paint, carpet, or tile for your next home improvement project; converting from one type of currency to another; calculating the chances that something will happen; interpreting a graph; comparing test results; understanding a statistical survey; and more.
